PERFECTHEAD

Carrington Institute agents aren't the only ones who can go undercover. PerfectHead takes a photograph of your face with the Game Boy Camera and puts it onto a character's head. Take your new look into the Combat Simulator against your friends and the Simulants, or meet yourself among the guards on your missions.

What You Need

Expansion Pak – Required!
PerfectHead only appears in the menus with the Expansion Pak fitted.

Game Boy Camera & Transfer Pak – Required!
Insert the camera into the Transfer Pak, and the Transfer Pak into any controller.

Controller Pak – Optional
Needed to save your heads and load them again later.

Getting Started

From the Combat Simulator menu choose Advanced Setup, then Player Setup, and select PerfectHead. The PerfectHead menu offers:

- Load A Saved Head: Load a head from a Controller Pak
- Make A New Head: Start again with a new picture
- Edit A Loaded Head: Change a head that's already loaded

Up to four heads can be loaded at once. Only one player can use PerfectHead at a time. If another player is already in it, the menu tells you who.

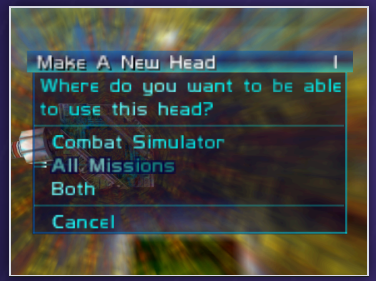

Playing On The PC Port?

Your webcam takes the place of the Game Boy Camera and Transfer Pak. Load Picture From Camera reads a Game Boy Camera save (*gbcam.sav*) in the save folder. Pictures are taken in smooth greys; for the Game Boy Camera's own dotted look, turn off *Smooth PerfectHead Camera* in Extended Options, Video.

Make A New Head

First, decide where your head will be used:

- Combat Simulator: Choose it for players and Simulants
- All Missions: It turns up on the guards
- Both: All of the above

Camera Setup

The game then looks for your camera. If you see Game Boy Camera Not Detected!, check all the connections and try again. With more than one camera connected, choose the one you want to use. Then choose:

- Take A Picture Now: Use the camera live
- Load Picture From Camera: Pick one of the photos already saved in your Game Boy Camera

Taking Your Picture

Once the camera has adjusted to the light, a guide shows where your face should go: the outline of the face, with a line for the eyes and one for the mouth. Line yourself up with it and choose Shoot!. Then choose Keep Picture to carry on, or Try Again.

Agent's Tip

Light your face evenly from the front, stand against a plain background and look straight into the camera. Keep the whole face inside the guide; your hair can go above it.

THE EDITOR

Once you've kept a picture you're in the PerfectHead Editor. Your head turns above the menu and updates as you work.

- Take Another Picture: Replace the picture, keeping your other settings
- Change Head: Choose the character head your face goes on (pg. 30)
- Position Picture: Frame your face and set its brightness (pg. 29)
- Color Face & Hair: Choose the skin tone and hair colour (pg. 30)
- Shape Head: Make the face flatter or fuller (pg. 30)
- Remove Head: Remove this head from memory
- Cancel Changes: Throw away everything since you came in
- Keep Changes: Finish and save your head (pg. 31)

If you press B after changing a head you'd already made, you're asked whether to Keep or Revert your changes.

Position Picture

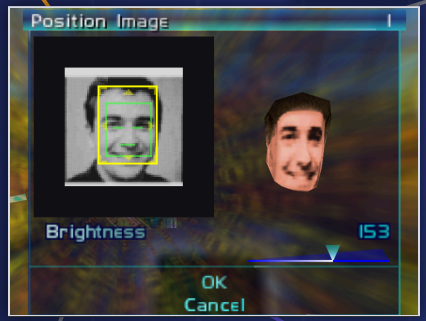

The frame shows which part of the picture is put on the head. Use it to centre your face and zoom in or out.

C Buttons

Move the frame up, down, left and right. The arrow on each side lights up as it moves.

L & R Buttons

L makes the frame smaller to zoom in on your face; R makes it bigger to take in more of the picture.

Control Stick

Highlight *Brightness* and push left or right to lighten or darken your face.

A Button

Choose *OK* to keep the new frame, or *Cancel* to put it back where it was.

Off The Edge

The frame can go past the edge of the picture. Anywhere it does, the head keeps its own face, so a photo taken a little off-centre can still be lined up.

Change Head

Your picture is painted onto one of the character heads, which gives you its hairline, ears and build. Push left or right to look through them, then choose OK. A new head starts on one picked at random.

Color Face & Hair

- Face: Style 1 to Style 4, four skin tones
- Hairstyle: Normal keeps the head's own colour; or choose Blonde, Black, Auburn or Blue Rinse

Shape Head

Slide Depth to make your face flatter or fuller. In both screens, choose OK to keep the change or Cancel to undo it.

Agent's Tip

Pick a head whose hairline and face shape are close to your own; the head keeps its hair, ears and chin. Then use Position Picture to line your eyes and mouth up with the guide's lines, and a little more or less Depth to match a rounder or slimmer face.

Saving Your Head

When you're happy, choose Keep Changes. You're then asked whether to save the head to a Controller Pak:

- Save: Choose a Controller Pak and save it there
- Don't Save: Keep the head in memory only

Head Complete! then tells you where you can use your head. Choose Finish, or Edit Head to keep working on it.

Loading A Head

Choose Load A Saved Head to see the heads on every Controller Pak that's inserted. The highlighted head turns above the list, so you can find the right one. With three or four players only the pictures are shown.

Using Your Head

Head Complete! reminds you where your head can be used, depending on your answer to *Where do you want to be able to use this head?*

- Combat Simulator: On players and Simulants (pg. 33)
- All Missions: On the enemies in solo play (pg. 32)
- Both: All of the above

To change where a head is used, load it again with Load A Saved Head and give a new answer.

IN THE FIELD

Compatible Cameras

PerfectHead recognises the camera by its cartridge, so every version of the camera works, whatever its label says:

- Game Boy Camera: USA and Europe, in all its colours
- Game Boy Camera Gold: The Zelda edition (USA)
- Pocket Camera: Japan, both releases
- Hello Kitty Pocket Camera: Unreleased prototype
- Homebrew cameras: Camera cartridges re-flashed with Photo! or 2bit PXLR Studio

Only Game Boy Camera cartridges can be used. Any other Game Boy Game Pak in the Transfer Pak gives Game Boy Camera Not Detected!

Solo Missions

Answer All Missions or Both and your head joins the enemy ranks. Load up to four PerfectHeads and they're shared out at random among the guards on every mission you play.

- Each head goes on guards of the same sex as its base head
- At most half of a mission's guard faces are swapped, so you'll still meet the usual crew
- Mission heads stay until the power is turned off; load them again with Load A Saved Head next time

Agent's Tip

Load four different faces to fill the facility with friends. Pick base heads of both sexes to spread them across all the guards.

Combat Simulator

Answer Combat Simulator or Both and any loaded head can be worn by a player or a Simulant. Your PerfectHeads come after the usual heads in the head list.

Players

Choose Player Setup, then Character, and push left or right on the head until you find your own face. Then choose a body to go with it. Save the player to keep the choice; the head is loaded from the Controller Pak with it.

Simulants

Choose Simulants from the Game Setup screen and pick a Simulant (or Add Simulant...). Choose Character... and select a PerfectHead in Simulant Character. Put your friends' faces on the Simulants and take them on, or give every Simulant yours.

UNOFFICIAL ADDENDUM

This addendum is fan-made for the restored PerfectHead feature in the Perfect Dark decompilation and its PC port. It is not produced, approved or endorsed by Rare Ltd. or Nintendo, and isn't part of the original instruction booklet.

Perfect Dark is a trademark of Rare Ltd. Nintendo 64, Game Boy Camera, Transfer Pak, Expansion Pak and Controller Pak are trademarks of Nintendo.
